

IN THE CLAIMS:

Please cancel Claims 1 through 11.

Please add the following Newly Added Claims:

- A²
12. (Newly Added) An infusion bag for preparing tea, comprising:
a suspension unit made of a sheet-like carrier material, said suspension unit having a grasping area; and
at least two chambers, formed of a filter material, for containing an amount of a substance, said chambers being produced and filled with the substance independently of one another, said chambers each having a top side, said chambers being connected to one another at respective top sides to form a common edge;
wherein said chambers are connected to the suspension unit at the common edge, said chambers being turned away from the grasping area; and
wherein the suspension unit is longer than the chambers.
13. (Newly Added) The infusion bag according to Claim 12, wherein the sheet-like suspension unit is provided with punch holes which form a rectangular area and/or a T-shaped notch.
14. (Newly Added) The infusion bag according to Claim 12, wherein each of the chambers is made out of tubular sheets.
15. (Newly Added) The infusion bag according to claim 12, wherein each of the chambers is made out of a sheet-like filter paper material by welding.
16. (Newly Added) The infusion bag according to claim 12, wherein each of the chambers is made out of sheet-like filter paper material by heat-sealing of side edges.
17. (Newly Added) The infusion bag according to Claim 12, wherein the chambers are filled with different amounts of the substance.

18. (Newly Added) The infusion bag according to Claim 12, wherein the substance comprises tea.

19. (Newly Added) The infusion bag according to Claim 12, wherein the substance comprises aromatic substances.

A2
20. (Newly Added) A method for producing an infusion bag, the method comprising:
forming a suspension unit of a sheet-like carrier material such that said suspension unit includes a grasping area;
forming independent of one another at least two chambers of a filter material such that said chambers include a top side and are capable of containing a substance,
filling independent of one another said at least two chambers with the substance; and
connecting simultaneously said at least two chambers at said top side to said suspension unit such that said chambers are turned away from said grasping area;
wherein said suspension unit is formed to be longer than said chambers.

21. (Newly Added) A method for producing an infusion bag, the method comprising:
forming a suspension unit of a sheet-like carrier material such that said suspension unit includes a grasping area;
forming successively at least two chambers of a filter material such that said chambers include a top side and are capable of containing a substance,
filling successively said at least two chambers with the substance;
connecting a first of said at least two chambers at a first top side to said suspension unit;
connecting a second of said at least two chambers at a second top side to said suspension unit and to said first top side to form a common edge of said at least two chambers;
wherein said at least two chambers are turned away from said grasping area; and
wherein said suspension unit is formed to be longer than said at least two chambers.
